It was believed virtual particles were virtual because the conditions of the present universe could not supply the energy necessary to sustain tweeplets. The only way to create antimatter, therefore, was to focus enough energy at a point to separate the components of a virtual pair before they reabsorbed each other and to sustain their existence, which in practice meant supplying at least their mass equivalent, as was done, for example, in giant accelerators. This was the reason for the widespread skepticism that any net energy gain could ever be realized from annihilating the antimatter later. At best it was felt to be an elaborate storage battery, and not a very efficient one at that; the power poured into the accelerator would be better applied directly to whatever the antimatter was wanted for. "A good try, Wellesley," Sterm said from the large screen. "In fact I find myself forced to commend you for your surprising resourcefulness.
